CareerFoundry
Full-Stack Web Development Certificate
Jan 2021 - Dec 2021

Rutgers University
Information Technology & Informatics
New Brunswick, NJ

EXPERIENCE

E-Commerce Assistant • H&R 20 INC Los Angeles, CA // June '20 - Jan '21

- Executed content updates which included adding, modifying, and removing content for company's main website and accounts across several major wholesale fashion platforms
- Facilitated the procurement of goods from other wholesale fashion boutiques
- Resized and formatted graphics for company's multiple online spaces
- Secured deliverables within budgetary constraints and deadlines
- Participated in idea-generating team sessions to insure quality assurance and recommend solutions for achieving goals

Part-Time Assistant Teacher • Edulux Seoul, South Korea // Oct '19 - Dec '19

- Curated a strong understanding of company goals and objectives before each class
- Assisted senior teachers with lesson planning by creating, developing, and contributing new ideas
- Established best practices when communicating with parents and proposed solutions to their inquiries about how to integrate English outside of school

Production Assistant • JNS Apparel New York, NY // Jan '18 - Aug '18

- Selected and edited content to distribute to clients based on their brand guidelines and input
- Prepared and maintained client's past and present orders when presenting new designs every month to client's lead buyers
- Configured and customized existing products according to client's specifications
- Coordinated deliverance of goods from company's warehouses to client's warehouses

PROJECTS

Meet 

Applied test-driven development (TDD) technique to build a serverless, progressive web application (PWA) that uses the Google Calendar API to fetch details on upcoming, fictitious coding events in cities all over the world.

Tawk 

Developed using React Native, Gifted Chat and Firebase Firestore a messaging app for mobile devices. Tawk provides users with a chat interface and options to share images and their location.

Stubz API 

Built a RESTful API using Node and Express that provides all necessary URL endpoints to access the movie, genre, director, and user collections stored within a database created in MongoDB.

Stubz - React client 

Developed a single-page application (SPA) using React for the client-side of Stubz API. New users can register; existing users can log in, view/update profile or favorite movies list, and have access to information about movies, directors, and genres.

Stubz - Angular client 

An Angular version with a new design makeover of the Stubz client app. It offers the same functionalities as its React counterpart.

PokeDex 

Created a simple web application (SWA) with HTML, CSS, JavaScript, and Bootstrap that showcases a searchable list of various Pokemon characters and their descriptions. An external API was used to load such data.
